|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>"WARNING"</b></p> <p>1. This helmet conforms to the ANSI/2003-2008 standard for bicycle helmets. It is designed for use with pedal cycles, skateboards and kick scooters, not intended for motorbike use.</p> <p>2. No helmet can protect the wearer against all possible impacts.</p>                                                                                                                                                                                                                       | <p><b>THE PROPER FIT</b></p> <p><b>STEP 1:</b> The helmet fits correctly when the F path hold it firmly but comfortably in place. Pads are held in place by hook and loop style fastener. All string adjustments MUST be made with the helmet in the proper position. Failure to do so will result in a poor fit. This will allow the helmet to move out of position or come off in an accident. For proper position, please refer to Diagram A.</p>                                                                                                               | <p><b>STEP 4:</b> Always wear the helmet with the chin strap buckle fastened and the strap pulled tight. Make sure the strap is well back against the throat, NOT on the point of the chin. Straps worn on the point of the chin increase the chance of the helmet coming off in an accident. See Diagram C and Diagram D on how to tension and release the buckle and Diagram E shows the proper placement of the chin strap.</p>                                                                                                              |
| <p>3. The helmet is designed to be retained by a strap under the lower jaw.</p> <p>4. To be effective, a helmet must fit and be worn correctly. To check for correct fit, place helmet on head and make any adjustments indicated. Securely fasten retention system. Grip the helmet and try to rotate it to the front and rear. A correctly fitted helmet will be comfortable and should not move forward to obscure vision or backwards to obscure the forehead.</p>                                             | <p><b>DIAGRAM A</b></p>  <p><b>CORRECT</b>      <b>INCORRECT</b></p>                                                                                                                                                                                                                                                                                                                                                                                                          | <p><b>DIAGRAM C</b>      <b>DIAGRAM D</b>      <b>DIAGRAM E</b></p>  <p>Make sure the loose end of the strap passes through the rubber D ring. If it does not, the strap may slide loose and the helmet can come off accidentally. See Diagram F.</p>                                                                                                                                                                                                      |
| <p>5. No Adjustments should be made to the helmet except those recommended by the helmet manufacturer.</p> <p>6. The helmet is designed to absorb shock by partial destruction of the steel and foam. This damage may not be visible. Therefore if subjected to severe force, the helmet should be destroyed and replaced even if it appears unharmed.</p>                                                                                                                                                         | <p><b>STEP 2:</b> Always wear a helmet low in the front to protect the forehead as in the correct figure in Diagram A.</p> <p><b>STEP 3:</b> The front and rear straps should join at a point slightly below and in front of the ears. See Diagram B. To adjust the position of the straps hold one end of the buckle in one hand and slide the adjuster up or down as necessary with the other hand connecting the adjuster to the front or rear strap individually. Hold the strap to be adjusted and slide the slide adjuster in the appropriate direction.</p> | <p><b>DIAGRAM F: D RING</b></p>  <p><b>D RING</b></p>                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>7. The helmet may be damaged and rendered ineffective by petroleum and petroleum products, cleaning agents, paints, adhesives and the like, without the damage being visible to the user.</p> <p>8. A helmet has a limited lifespan in use and should be replaced when it shows obvious signs of wear.</p> <p>9. This helmet should not be used by children while climbing or doing other activities where there is a risk of tripping or strangulation if the child gets tripped while wearing the helmet.</p> | <p><b>DIAGRAM B: TUGGLE</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p><b>STEP 5:</b> Before using the helmet, make sure it fits correctly, the straps are correctly adjusted and the chin strap is tight enough. Put the helmet on in the correct position. Fasten the chin strap and pull it tight.</p> <p><b>STEP 6:</b> Once you are satisfied that the helmet fits correctly and all straps are properly adjusted and tightened, take a short ride. Pay attention to overall comfort and helmet stability while riding. Make any minor adjustment to fit pads and straps to improve the comfort stability.</p> |
