## ICE SHAVER

### How to Use the Ice Shaver

#### Step 1: Assemble the Parts

- Hold the bottom base with one hand.
- With your other hand, twist the transparent cylinder counterclockwise until it clicks and locks securely into place.

#### Step 2: Add Ice

- Place the ice cube made from the provided ice tray into the holder.
- For best results, use ice cubes about 5 cm x 1.5 cm or smaller as larger ice is harder to shave.
- Do not overfill.
- Do not use:
  - Ice cubes made in a freezer's ice maker.
  - Commercial rock ice (it can damage the blade).

#### Step 3: Secure the Lid

- Position the lid on top.
- Hold the transparent part firmly with one hand.
- With your other hand, press the lid down and twist it clockwise until it is tightly locked in place.

#### Warning:

- \* Be careful not to unlock the bottom base while screwing on the lid.

#### Step 4: Shave the Ice

- Hold the main body firmly with one hand.
- With your other hand, rotate the top knob clockwise continuously.
- The ice will be shaved as you rotate.

#### Warning:

- \* Do not turn the knob counterclockwise during use.
- \* Be careful not to unlock the bottom base while shaving the ice.

#### NOTE:

- During use, the blade may freeze over. If this happens, rinse it with water to keep the crushing smooth.
- Always wash and dry all parts after use to prevent buildup and ensure proper performance.
- The blade is extremely sharp. Handle with care during use, assembly, and cleaning.
