| A.Door Panel x 1pc | B.Main Body Panel x 7pcs | C. Buckle Fastener x 8pcs | D. Nail x 8pcs |
|--------------------|--------------------------|---------------------------|----------------|

## Instructions

### Step 1.

Place the door panel (A x 1pc) vertically on the floor (**pleases note the door should open outward**), then take out main body panel (B x 1pc) and place it to the door panel. Place the side of main body panel with the protruding hinge close to the side of the door panel with the square hole, then insert the hinge into the hole.

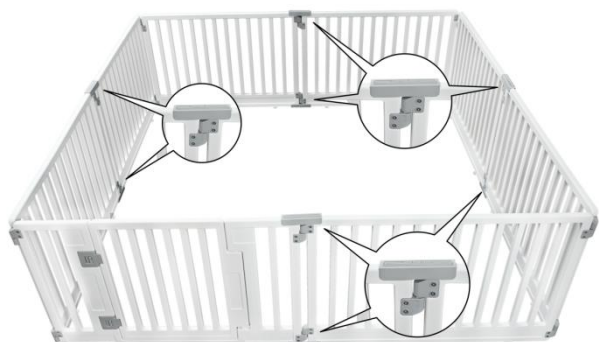

### Step 2.

Install the remaining panels and adjust their shape.

The enclosure can be in different shape, when in square shape, to combine and match two panels on the same plane, please add buckle fasteners (C x 8pcs) for fixation.

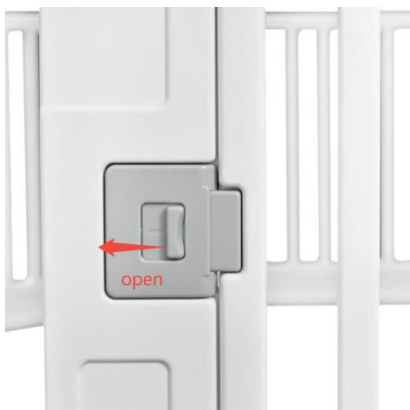

### Step 3.

For outdoor use, please secure the enclosure by inserting nails (D x 8pcs) into the corner holes at the bottom of the panel, same as below image. After using, please clean the suction cup at the bottom for the next use.

### How to open the door

Slid left to open the door, please see below image.

### Warning

This enclosure for pet use only.

Ensure that all panels are fully connected.

The pet enclosure contains nails, please keep children away during installation. Otherwise it may cause injury.

If the suction piece is out of shape, soak it in hot water for one minute and press it back into its original shape.

After using it outdoors, please check the number of nails and clean the suction cup at the bottom for the next use.

Always ensure that there is water available for your pet.

All animals behave differently and may warrant supervision.

Suitable for small and medium animals.

For your pet's safety, inspect regularly and remove if damaged.
