Crushable Ice Mould – How to Use

- 1 Fill the Inner Cup**
Remove the lid and pull out the inner cup. Fill it with water.

- 2 Insert and Secure**
Place the inner cup back into the silicone outer mould. Press it down firmly while gently squeezing the outer cup to release any trapped air. This helps keep the inner cup from lifting.

- 3 Freeze**
Put the mould upright in the freezer until the water is completely frozen.

- 4 Loosen and Remove**
After freezing, leave the mould at room temperature for a few minutes, or pour a small amount of warm water around the outside wall. This makes it easier to remove the inner cup.

- 5 Crush and store**
Remove the inner cup. Squeeze the outer mould several times to break up the ice. The inner cup may be used as a storage container for the ice cubes or the ice can be poured directly into your drink.
