

RGB SENSOR LIGHT

Remote control functions

1. INSTALLATION

The RGB Motion Sensor Light must be installed so as to receive maximum sun light during daytime hours. Any cover that shades the panel will affect its ability

to absorb sunlight and decrease the amount of brightness and duration of the LED lights, The Light is weather resistant-they should not be affected by exposure to rain, snow or low temperature.

The solar panel has a light sensor. It will activate automatically at sunset and deactivate automatically at dawn. Its location should not be near a light source such as a porch light, street lamp, etc., as these lights might prevent the RGB Motion Sensor Light from automatically turning on.

IMPORTANT! When storing any solar product for an extended period of time, be sure to charge the battery . Storing any solar product without regular recharge could cause permanent damage to the rechargeable batteries.

DO NOT DISPOSE OF OLD BATTERIES-THEY SHOULD BE RECYCLED.

2. IMPORTANT SAFETY PRECAUTIONS:

Electrical Shock Hazard! Although it is weather-proof and safe for outdoor application, do not immerse the lighting set in any liquid. Keep away from fires, heaters, candles or other sources of heat. This is a decorative item, not a toy for children! Never connect it with other lighting.

Do not use wires, steel clips or nails for installation. Do not cover or obstruct the lighting. Do not hang other objects from the Light Please discontinue use if housing is damaged in any way.
