DIY Candle Kit Cactus Instruction Manual

8+
years

WHAT'S IN THE BOX

1. Silicone mold x 1
2. 80g soy wax x 1
3. 80g beeswax x 1
4. Wooden candle wick holder x 1
5. Wooden muddler x 1
6. Metal needle x 1
7. Candle dyes: light and dark green x 2
8. Disposable gloves x 2
9. 50cm length of candle wick x 1

EXTRA ITEMS YOUR WILL NEED

- › Plastic sheets to protect your work surface
- › A stovetop and heat safe dish or saucepan to heat the wax
- › Scissors

CREATING A CACTUS CANDLE

Makes 2 Cactus candles

Tips:

Read through instructions before starting.

1x cactus requires 1 equal portion of soy wax and beeswax or a ratio of 1:1 (or 40g of soy wax and 40g of beeswax combined)

1. Take out the metal needle, thread the candle wick through the end of the metal needle, then use the tip of the needle to penetrate the center of the base of the silicone mould. (Fig. 1-2)
2. Please reserve 5-10cm of the candle wick at each end of the silicone mould.
3. Thread the candle wick which is positioned at the top of the silicon mould through the middle of the supplied wooden candle wick holder. Ensure that you place it tightly in the middle of the silicone mould (Fig. 3-4)
4. Put on the supplied disposable gloves and begin making your candle.
5. Divide the soy wax and beeswax into 2 equal parts (Note: one candle of the mould requires a ratio of 1:1. (Fig. 6-7) Then add 1 of the 2 soy/beeswax parts into a heating dish to make one cactus candle.
6. Stir using the wooden muddler until the wax pieces are completely melted and add your chosen candle dye (Note: to test the colour, you can drop a small amount of wax on paper. If it is too light, you can continue to add more candle dye until you achieve your desired colour.) (Fig. 8)
7. After ensuring there are no bubbles present in the wax liquid (Note: you can use a thermometer to measure the temperature of the wax liquid, which needs to be heated to 70-80 degrees Celsius.) pour into the mould slowly. (Fig. 9)
8. When the wax liquid is about to reach the top of the silicone mould, ensure that you leave a gap of 1-2mm between the liquid and the candle wick holder to avoid uneven modeling. (Fig. 10)
9. Wait 3-4 hours until the wax has completely hardened, remove the candle wick holder, then gently peel back the silicone mould to reveal your candle. Cut any excess wick. (Fig. 11-13)
